

## **GRAPHENET: The Spanish Graphene Network**

**Mar Garcia Hernandez**

Instituto de Ciencia de Materiales de Madrid

CSIC

We here present the scope of the recently created Spanish Graphene Network. The network is a network of excellence linked to the Graphene Flagship but not limited to the flagship Partners. One major objective of GRAPHENET is the creation of the Spanish industrial group with interest in graphene. We also aim at defining a good practice code for graphene producers when labeling their materials so as to help the final users to make the best material choice for a particular application. Promoting synergies between academy and industry to apply in all kind of calls related to graphene activity (national and international) is also a must.
